YOUR CHRONOTYPE

Eagle

Intermediate Type

Eagles have a flexible rhythm that adapts well to most schedules. Your energy peaks midday, making you ideal for standard 9-to-5 routines. You can handle both morning meetings and evening social events with ease.

Peak focus · 9:00 – 11:00 AM

6:30 AM

Ideal wake time

9:00 – 11:00 AM

Best focus window

10:45 PM

Ideal bedtime

Natural strengths

- Steady midday energy for deep work
- Adaptable to most daily routines
- Balanced social and work timing

Watch-outs

- Rigid schedules can disrupt balance
- Energy dips mid-afternoon
- Can drift without a consistent routine

Best next steps

1

Block 10 AM – 2 PM for your deepest focus

2

Keep consistent wake and bed times for stability

3

Use midday energy for physical activity

Your personalised daily guidance

1

Anchor Your Sleep Window

Go to bed and wake up at consistent times within your ideal window (10:45 PM – 6:30 AM). Even on weekends, staying within 30 minutes of your target preserves your circadian rhythm.

2

Schedule Around Your Peak

Your peak energy is 9:00 – 11:00 AM. Block this time for your most demanding cognitive work — deep focus, strategy, and creative tasks.

3

Strengthen Your Circadian Anchor

Get 15 minutes of sunlight within an hour of waking to reinforce your natural rhythm.

4

Wind Down Gradually

Begin winding down 1 hour before your ideal bedtime. Lower lights, avoid screens, and try light reading or meditation.

5

Use Afternoon Movement

Afternoon workouts (2–4 PM) match your energy curve and avoid disrupting sleep.

6

Time Your Meals

Avoid heavy meals within 2 hours of bedtime. Your last caffeine should be at least 6 hours before your sleep window starts.

Important notice

This report reflects your sleep-wake preferences based on your assessment responses. It is not a medical diagnosis. Always consult your physician before making changes to your sleep or health routine. If you experience chronic fatigue, insomnia, or excessive daytime sleepiness, seek professional medical advice.
