YOUR CHRONOTYPE

Lark

Morning Type

Larks naturally wake early and peak in the morning. You're most productive before noon and tend to wind down in the evening. Schedule important tasks early and use afternoons for lighter work.

Peak focus · 6:00 – 9:00 AM

5:30 AM

Ideal wake time

6:00 – 9:00 AM

Best focus window

9:30 PM

Ideal bedtime

Natural strengths

- Daytime energy peaks before noon
- Consistent early-morning wake-up
- Strong focus in the early hours

Watch-outs

- Evening social events drain energy quickly
- Hard to stay awake past 10 PM
- Weekend sleep drift disrupts rhythm

Best next steps

1

Schedule important tasks before your noon peak

2

Avoid caffeine after 2 PM to protect early sleep

3

Wind down with dim lighting by 9 PM

Your personalised daily guidance

1

Anchor Your Sleep Window

Go to bed and wake up at consistent times within your ideal window (9:30 PM – 5:30 AM). Even on weekends, staying within 30 minutes of your target preserves your circadian rhythm.

2

Schedule Around Your Peak

Your peak energy is 6:00 – 9:00 AM. Block this time for your most demanding cognitive work — deep focus, strategy, and creative tasks.

3

Protect Your Morning Advantage

Your morning clarity is your superpower. Avoid scheduling distractions before 10 AM.

4

Wind Down Gradually

Begin winding down 1 hour before your ideal bedtime. Lower lights, avoid screens, and try light reading or meditation.

5

Use Early Activity

Morning exercise (6–8 AM) aligns perfectly with your peak cortisol and body temperature.

6

Time Your Meals

Avoid heavy meals within 2 hours of bedtime. Your last caffeine should be at least 6 hours before your sleep window starts.

Important notice

This report reflects your sleep-wake preferences based on your assessment responses. It is not a medical diagnosis. Always consult your physician before making changes to your sleep or health routine. If you experience chronic fatigue, insomnia, or excessive daytime sleepiness, seek professional medical advice.
